Technical Specifications **For Storage**

Bidder should ensure that proposed solution is compatible with the existing setup available at Secunderabad and Gurugram. Designated solution should provide JBOD with disks compatible with the existing setup.

Current Setup: -

RailTel has 1 unit of XS5324D QSAN controller with 2*WD UD60 JBODs (20TB HDD Fully Populated) with usable capacity of ~2PB serving the existing storage capacity at both Secunderabad and Gurugram.

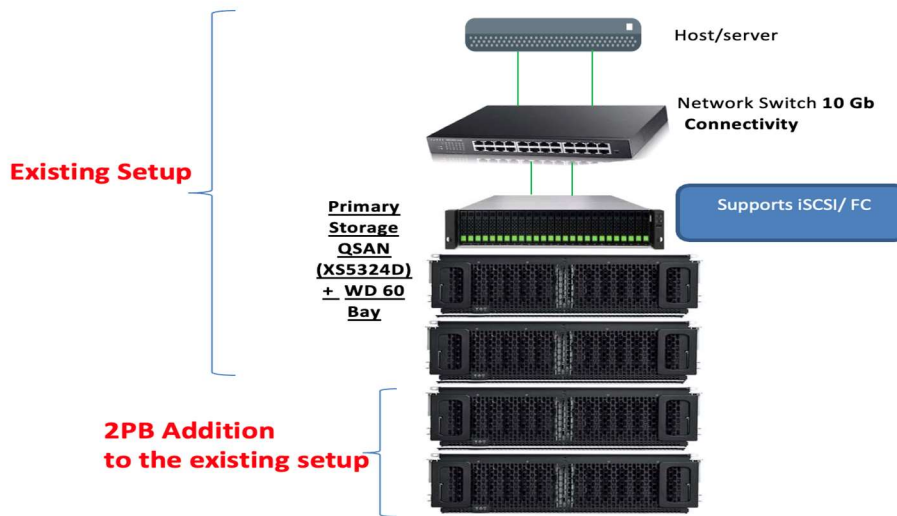

Requirement: -

RailTel wants to upgrade the QSAN storage capacity at Secunderabad (2PB) and Gurugram (1PB) with 5 years support. Existing QSAN XS5324D controller must be able to take the load of 4PB storage after the upgrade. The upgrade should be seamless without any technical challenges. Proposed solution upgrade must be highly available and scalable. Proposed solution must reduce operational complexity and provide a state of art technology with enterprise grade storage with high performance without compromising durability / availability for RailTel's Storage requirement.

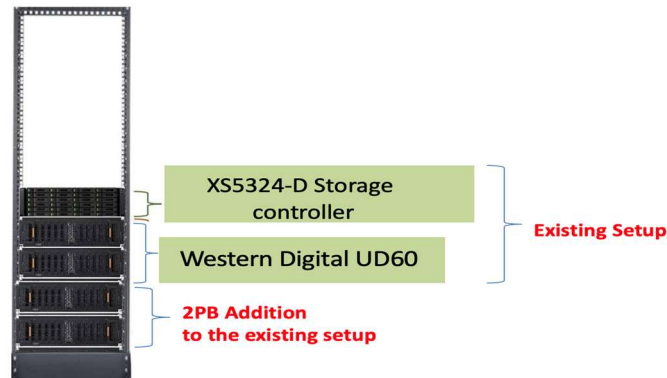

Scope of Work: -

- 1) Upgrade of storage capacity may be carried out by deployment of additional JBOD / Storage Array tightly integrated with the existing setup of QSAN Controller + WD JBODs. Bidder can propose any type / make / model of JBOD / Storage Array for augmenting storage capacity; However, proper integration with existing setup without any impact / reduce in functionality of working setup or incompatibility with existing features (during integration or in future) must be ensured.
- 2) Any additional, dependent activities (such as upgrade of Memory in existing QSAN Controller, Supply of additional Power Supply and Connector cables, Replacement of power cables, change of connector cables, Firmware upgrade, etc) must be carried out by the Bidder without any additional expenditure to RailTel.
- 3) 99.999% high availability is expected as Dual controllers are present.
- 4) It is the responsibility of the Bidder to prevent data loss or impairment of existing functionality at any cost during the integration / upgrade activity.
- 5) RAID level 6 with sufficient parity disks is proposed to maintain redundancy and resilience to failures.
- 6) Technical support and Software updates & upgrades should be provided until the product's end of life tenure. Bidder must ensure that proposed solution should coexist with current OEM support environment.
- 7) It is suggested to keep some spare disks at RailTel sites to carry out quick replacement in case of disk failures.
- 8) Bidder must carry out storage upgrade after thorough analysis of the existing deployment (shared herewith) and ascertaining the implications of products proposed for upgrade. Any complications or unplanned downtime during the upgrade will invoke a penalty decided by the RailTel management depending upon the loss incurred due to damage/loss of data/non availability of the existing system.

Existing Backend Connectivity

Backend Connectivity After adding 2 JBODs to get additional 2PB capacity
